Production and Output.

THE COKE TRADE AT ROCK BOTTOM

And the Producers Look for
Slow Improvement
Henceforth.

SOME COKE IS BEING STOCKED

Shipments From the Region, However,
Still Continue in Excess of Ten
Thousand Cars a Week—Ovens in
And Out of Blast

The Connellsville coke trade is standing steadily on the level of production at about the same level as the month of September, the operators indulging in the hope that it is rock bottom for them and that henceforward there will be improvement. The slow progress, however, has not yet led to the pattern encouraging. It has been a long struggle against adversity, and the producers are now looking for a slight improvement in the price of coke, but they are not yet ready to say that the market is improving.

Production last week was 17,142 tons, or slightly less than in previous week, and divided practically as usual. The market is not improving, and the operators are looking for a slight improvement in the price of coke, but they are not yet ready to say that the market is improving.

Some improvement in the price of coke is being made, but it is not yet enough to make the operators feel that the market is improving. The operators are looking for a slight improvement in the price of coke, but they are not yet ready to say that the market is improving.

Since the first of the year, the price of coke has been steadily falling, and the operators are looking for a slight improvement in the price of coke, but they are not yet ready to say that the market is improving.

The price of coke has been steadily falling, and the operators are looking for a slight improvement in the price of coke, but they are not yet ready to say that the market is improving.

The price of coke has been steadily falling, and the operators are looking for a slight improvement in the price of coke, but they are not yet ready to say that the market is improving.

CONSERVATION IN THE CONNELLSVILLE REGION

The Conservation Convention at Saint Paul is attended by some of the leading statesmen and thinkers of the country. This fact is much to the credit of the conservation of our natural resources, particularly our woods and waters.

The conservation of our natural resources is a subject which has been discussed in the minds of the people and has become an important part in shaping the future of the nation.

The conservation of our natural resources is a subject which has been discussed in the minds of the people and has become an important part in shaping the future of the nation.

ers have always had new soils to draw upon for crops. When the old land was worn out little serious effort was made to restore its fertility. The old land moved upon new soil.

The high cost of living is one of the results of our wasteful and wasteful land policy. During the last half century our land has been growing to such a wonderful extent that it has become one of the world's great workshops.

Our bounty of harvests is a source of pride to our countrymen. It is a source of pride to our countrymen. It is a source of pride to our countrymen.

The remedy is that which has been pointed out in these columns on more than one occasion. It is the remedy voiced by Secretary Wilson. Out at latest national conference must be restored to its full value and best service to humanity.

From the land comes our living and to the land we must return for it. Back to the Soil!

THE MAINE ELECTION AND WHAT IT MEANS

The important fact that Maine has gone Democratic will come to the masses of the Republic in a very short time when the election in Maine is held. It will be a very important election, not only for Maine but for the whole country.

While Maine is a small state, it is a very important one. It is a very important one. It is a very important one. It is a very important one.

The election in Maine is a very important one. It is a very important one. It is a very important one. It is a very important one.

The election in Maine is a very important one. It is a very important one. It is a very important one. It is a very important one.

The election in Maine is a very important one. It is a very important one. It is a very important one. It is a very important one.

The election in Maine is a very important one. It is a very important one. It is a very important one. It is a very important one.

The election in Maine is a very important one. It is a very important one. It is a very important one. It is a very important one.

The election in Maine is a very important one. It is a very important one. It is a very important one. It is a very important one.

The election in Maine is a very important one. It is a very important one. It is a very important one. It is a very important one.

The election in Maine is a very important one. It is a very important one. It is a very important one. It is a very important one.

The election in Maine is a very important one. It is a very important one. It is a very important one. It is a very important one.

The election in Maine is a very important one. It is a very important one. It is a very important one. It is a very important one.

The election in Maine is a very important one. It is a very important one. It is a very important one. It is a very important one.

The election in Maine is a very important one. It is a very important one. It is a very important one. It is a very important one.

The election in Maine is a very important one. It is a very important one. It is a very important one. It is a very important one.

The election in Maine is a very important one. It is a very important one. It is a very important one. It is a very important one.

The election in Maine is a very important one. It is a very important one. It is a very important one. It is a very important one.

Westmoreland county elections may be materially purified. The lesson would likely be a lasting one. Election officers would thereafter be more careful as well as more honest in counting and counting primary votes.

The county could be depended upon to separate the sheep from the goats and to punish the sheep to the hilt.

A still dose of the same kind of medicine would improve the political health of Fayette county.

BETTER HOT AIR
THAN DANGER OF DEATH
Our colorless but otherwise esteemed contemporary, The News, furnishes the unsolicited opinion of a leading boiler expert concerning the danger of losing the High School steam heating boiler in the basement of the building as a result of its use.

Notwithstanding some contrary opinions, The Courier still believes that it is only doing its plain duty to the public and especially the parents of children who attend the High School in directing attention to the matter.

We have not presumed to pass upon the question but merely to voice in earnest opinion and put it up to the expert authorities for investigation. It is the duty to satisfy these views beyond a doubt that the present location of the steam heating plant threatens no danger, but not enough to say the danger is not of its kind. It should be no danger at all if it can be prevented.

But the danger is not of its kind. It should be no danger at all if it can be prevented.

With a fine show of indignation the Courier was filled with indignation. It was a fine show of indignation. It was a fine show of indignation.

ACCIDENTALLY SHOT, C. E. BROWN DIES.

Big Colt Revolver Accidentally Discharged as It Was Handed to Him.

EXPIRED ALMOST INSTANTLY

John Carney Who Had Weapon in His Hand Gave Himself Up and Was Committed to Jail—Accident at South Connelville Saturday Night

Charles J. Brown a well known young man of South Connelville, was accidentally shot Saturday night by John Carney, his intimate friend. The bullet entered the chest, fractured the jaw and after severing the spinal cord in the back he died almost instantly. Mr. Brown and his family were close friends of the Carneys and were visiting at Carney's Saturday night. The two men started out for a walk in the direction of the Trotter water works plant. Carney had a new .45 calibre revolver in his pocket. Brown asked to see the weapon and as he was receiving it from Carney the revolver was accidentally discharged. Brown fell without a sound and was dead before a physician could be summoned. Carney once summoned an officer and informed him of the circumstances. He stated that he was reading a newspaper and would await the arrival of officers. Constable Wilson and Policeman Joseph O'Brien brought Carney to Connelville and committed him to the borough police station. This morning County Det. Frank McLaughlin made an examination against Carney before Magistrate J. M. Buttermore charging him with murder. He was taken to Uniontown and committed to jail to await a hearing which will not be given until after the coroner's inquest which is to be held this evening at 7 o'clock. Mr. L. S. Smith, undertaker, is in charge of the funeral. Mr. Bell, a local doctor, is attending to the body. Mr. and Mrs. W. H. Smith and son, Mr. and Mrs. Thomas Smith, witnesses of the shooting, which occurred shortly after 10 o'clock.

Richard was a son of Robert G. and Rich T. Brown. The latter was a well known man in Connelville and his home was at South Connelville. He was a member of the Humboldt plate and had been married 27 years. He had four sons and was much loved by all who knew him. WORK ON WABASH THE PAST WEEK.

Number of Men East and
West of Ohio
Increasing.

CONSTRUCTION OF BRIDGES

Site For School Building Taken in
Somerset County By Railroad Com-
pany—A Jury View Near Confluence
Today.

There have been a few slight changes in the work on the Wabash since last week. The number of men at work both east and west of Ohio is increasing. The first bridge on the line to be completed is the one at Harrodsburg crossing the Casselman that was completed Saturday by Nay & McDonald, concrete contractors. The work completed on this bridge was four piers and two abutments having about 2,000 cubic yards of concrete, and was completed in nine weeks. The contracting company upon completing it immediately started work on another at Confluence that will be both higher up and have more piers than the one at Harrodsburg. The L. D. Tuttle Company, who are building the bridge at Ohio, started to work last week on a bridge across the Casselman east of Pinkerton tunnel where they have two bridges to build.

A construction firm started work on a three mile section from Fort Hill westward and besides building camps have commenced to clear the right of way. The same conditions prevail between Casselman and Garrett where a section has been let that nothing has been done on up to this time.

Word comes from Big Savage tunnel that Superintendent Brown of the Carter Construction Company in charge of the work there has been relieved of his position and that President J. B. Carter will direct his men in person for the next few months. Col. J. M. Turner, right of way agent for the Western Maryland extension, met the school directors of Larimer township several days ago on the grounds of the Pine Grove school house and came to an agreement with the board by which the railroad company will buy a new site for the school house and remove the building to the east side of the deep cut which is to be made at that place. It was at first planned to tunnel the hill on which the school house is situated, but this was afterward changed to a cut which would leave the school building perched on the brink of a precipice.

The first jury of view on the Western Maryland right of way is to meet at Confluence today to appraise the property of Hiram Franz who would not accept the railroad's offer.

The company filed a bond of \$500 in Somerset last Monday in favor of the Harrodsburg Hotel Company pending the outcome of condemnation proceedings for right of way over land of the hotel corporation. A bond was also filed in favor of Mrs. Lucy A. Cupp for right of way through property standing in her name at Casselman.

AUTOMATIC DEVICE

For Feed Water Recording on Steam Boilers.

An automatic feed water recording device for steam boilers has been invented by William Roubascher of Conneltsville, an inspector of the Hartford Steam Boiler Company which, it is claimed, will be a way revolutionize certain methods in the care of stationary steam boilers. The device is such that an accurate and complete record of the water in all boilers at a plant can be seen at an instant's glance in the office of the plant, or wherever the recording end of the device is located.

The device will not only result in reducing the cost of boiler insurance, its inventor claims, but will also give men in charge of a plant instant knowledge whether the firemen are performing their duties properly.

The device is operated by electricity. An enclosed float operates a reed stat, which in turn records the gauge of the water on a dial for that purpose. It will be possible, where these devices are installed, to tell when boilers are "blown out," as required by the insurance regulations; when water is fed into the boilers and the exact stage of water in every boiler on which the device is attached. The device is being patented but as yet no arrangements have been made for the manufacturer and marketing of the device.

FIRE BOSSES ORGANIZE.

Application for Charter for Association in Bituminous Region.

The Fire Bosses' Protective Association of the Bituminous Mine of Pennsylvania has made application for a charter and the United States has been given as the date for a hearing. It is to have no capital stock, but dues and membership fees are to be paid.

The organization is for the encouragement and protection of safe and sound working conditions, and the betterment of the bituminous coal mining industry of the State by instructing the miners, by assisting them in their efforts to get employment and by seeing that the coal and material sold to them is of the best quality and that they are not deceived.

Officers of the organization named

In the application are: State President, Daniel Jones of Pricedale; State Vice President, P. J. Rooney of Broughton; State Secretary, Thomas Stycher of Frank; State Treasurer, Nicholas Schulte of Bridgeville; Executive Board, Joseph Erwin of Banning; Thomas McManus of Finleyville; John Dixon of Ellsworth; R. H. Clapp of Canonsburg; and Joseph P. R. Port of Frank, Pa.

A BIG FILL

Will Be Required by Western Maryland Over Hard's Bottom.

It is stated that the Western Maryland will require a strip of land more than 200 feet wide across the Hard bottom south of town for its line into the borough. The R. W. Hill Construction Company has this contract. A 50 foot fill will be needed on the property in order to maintain the grade of the railroad.

The stretch from Porter hill into Greenwood has presented probably more complications for the railroad than any other part of the line. The road will cross the Baltimore & Ohio above grade. Its line also runs across the reservoir of the West Penn Railways Company at the power house. This is a handicap. From there to the hill, several hundred yards distant, a solid fill is required. It is said that the cubic yards of earth needed to make this fill will run into the hundreds of thousands. The dirt will be taken from the excavation work at each end of the fill, from Porter hill on the south and the bluff over the Pennsylvania railroad tracks on the north.

Owing to the deep-fill that will have to be made, 75 feet on each side is required for the slope. It is thought that the top of the fill will be at least 20 feet wide.

The fact that earth settles to a considerable extent makes the job of filling a ticklish one.

RECEIVER APPOINTED.

For the Penwood Coal Company of Somerset County.

SOMERSET, Sept. 13.—Attorney J. G. Ogilvie of Somerset has been appointed receiver for the Penwood Coal Company by Judge Koser of the request of about 50 men, mostly foremen, who were formerly employed in the mine of the concern near Rockwood, and to whom wages for their labor were due.

Attorney Ogilvie will take charge of the assets of the concern at once and will endeavor to effect a speedy settlement of its affairs.

The Penwood Coal Company was organized about four years ago and took over a large acreage of valuable coal property in Milford and Black townships, which formerly was operated by the Hamis, South Side, Milford and several other coal companies. A mortgage in probably \$2,000,000 is held against this property by a Philadelphia financial institution, and it is likely that this encumbrance will sweep away a large portion of the proceeds of the sale of the Penwood property.

It is stated that the liabilities of the concern are heavy, and that the debtors will be small, although it is possible that the stockholders in the concern may be required to make good the debts of the company.

GOES WITH OVERHOLT.

C. C. Gray Has Been Appointed Distiller at Broad Ford.

Charles C. Gray of the South Side is now distiller for A. Overholt & Company at Broad Ford, having taken that position September 1. He is one of the most expert distillers in the country and goes back into the business where he worked several years ago and learned the art of distilling the best whiskey that can be made.

Mr. Gray, in his younger days, worked under old "Daddy" Myers, whose art of distilling made "Old Overholt" famous. Under Myers, Mr. Gray learned the art as no other man in this section has ever known it. After leaving the distillery he became a successful contractor and builder, later making a specialty of concrete work.

From time to time he was offered the position of distiller at the big Broad Ford establishment but declined all previous nominations. He was finally persuaded to take up the work again and began turning rye into whiskey the first of the month.

Barn Burned.

On Tuesday afternoon, during the severe electrical storm which passed over that section the new barn on the John W. McCullough place near Friendsville was struck by lightning and together with the contents was entirely consumed.

The Conneltsville Manufacturing & Mine Supply Company,

CONNELLSVILLE, PA.

Sole manufacturers of the Lepley patents and designs, covering a full line of Modern High Grade Mine Equipment Machinery

We have the largest and best equipped large equipment plant in Western Pennsylvania, fitted exclusively for the production of a high grade product. We manufacture

PUMPS. ENGINES. FANS.

Air Compressors.
Steel Hoisting Cages.

STEAM, COMPRESSED AIR OR ELECTRIC. SINGLE, DUPLEX OR TRIPLEX PATTERNS. WOOD LINED, BRONZE OR CAST IRON FITTED. FOR MINE, TANK OR MILL SERVICE.

HOISTING, HAULING OR STATIONARY. FIRST MOTION OR GEARED.

HEAVY STEEL PLATE CONSTRUCTION FOR HIGH DUTY SERVICE. BLOWING, EXHAUST OR REVERSING. DRIVEN WITH PLAIN SLIDE VALVE, PISTON VALVE OR CORLISS ENGINES.

SINGLE OR DUPLEX PATTERNS. SIMPLE OR COMPOUND.

PLATFORM AND SELF DUMPING. LARRIES, SCREENS, CHUTES, BULL WHEELS, HEAVY GEARS AND SPECIAL MACHINERY.

We manufacture none but the highest grade machinery, using only the best materials to be found in the market in its construction.

We are also prepared to acceptably repair or completely any part of any of our machines. Your inquiries will receive prompt and satisfactory attention.

The "Covington" Coal Leveler.

"1910" Model—Advantages.

Levels perfectly 200 ovens per day. Ovens burn 7% more coal, where leveler is used. Ovens bricked up as soon as drawn, conserving heat in oven.

One man operates machine.

Machine runs on larry track.

No changes to plant necessary for installation.

Labor saving, \$10 to \$12 per day in 400 oven plant.
